

EZ Bracket

> Universal Mounting

Full 360 degree movement of the male/female mounting bracket design permits easy orientation. This is a through hole design with no obstructions to cable passage.

> Versatile Cable Routing

Fully hidden: Wires may be routed through a hole in the pole or mast arm, through the EZ Bracket and into the "V-Channel" support tube. The lower arm provides a channel for the wire to be fed into the signal assembly. Connections may be made inside the EZ Bracket with optional connector kit!

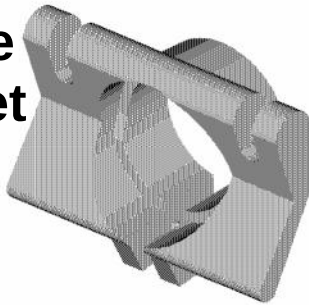

End Fitting Entry: Wires may enter the bottom rear of the lower arm assembly and feed directly into the signal assembly.

CGB Entry: Arms are available with 3/4" and 1" NPT threads to accept CGB's. Order CGBs separately, if required.
